

Introducing Polar Vision's Line of Sunlight-Readable Displays

**DUPONT** Display Solutions

# For The Best View Under The Sun

Finally, there's a one-stop, global resource for all your sunlight-readable display needs.

A DuPont Displays Company, Polar Vision offers the expertise, facilities and services needed to make off-the-shelf displays brighter, clearer, – and eminently more readable under high-ambient-light conditions. Our solutions include:

- **Passive Backlight Enhancements** – which increase the light output of an LCD without increasing power consumption or heat – a crucial benefit for those applications where thermal management is of paramount importance.
- **Active Backlight Enhancements** – Our active enhancements increase brightness by adding high-output lamps. In fact, our solutions can double or triple the light output of a display.
- **Hybrid Solutions** – Featuring contrast enhancement solutions to the front - and backlight enhancements to the back – of an LCD, hybrid solutions provide the optimum balance of increased backlight luminance and improved display viewability.

So if you're in the market for the ultimate in sunlight-readable displays, give us a call at (800)269.8801, visit our web site at [www.polarvision.com](http://www.polarvision.com), or email us at [sales@polarvision.com](mailto:sales@polarvision.com). We're ready to help you get the best view under the Sun.
